(a) best subspace for each level's own copies
captured weight
dimension d (of 574)
level 4 (8 copies)
level 5 (64 copies)
level 6 (512 copies)
level 7 (4096 copies)
(b) transfer between levels
captured weight of the test level
dimension d of the universal subspace
d = 57 (10 %)
levels 4-5 -> 6 (pre-registered)
levels 4-5 -> 7
level 6 -> 7 (exploratory)
levels 4-6 -> 7 (exploratory)
(c) universal state as the per-copy basis
edge error $E_W - E_0$
retained fraction of the boundary dimension
C1: 10 %
C2: 0.05
level 5 (64 copies), trained on levels 6-7
level 4 (8 copies), trained on level 5
level 4 (8 copies), trained on levels 6-7
